REC'D 27 NOV 2003

WIPO

PC

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

Notes

- If you need help to fill in this form or you have any questions, please contact the Patent Office on 0645 500505.
- Write your answers in capital letters using black ink or you may type them.
- If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- Once you have filled in the form you must remember to sign and date it.
- For details of the fee and ways to pay please contact the Patent Office.

SYSTEM AND METHOD FOR JACKPOT WAGERING

15 FIELD OF THE INVENTION

This invention relates to a system for jackpot wagering and, more particularly, but not exclusively, to a system for jackpot wagering in relation to casino games. The invention extends to a method for jackpot wagering in relation to casino games.

20

BACKGROUND TO THE INVENTION

Jackpot wagering systems are well known in land-based casinos. The most common such wagering system is found in a simple three-reel slot machine. Each
25 reel of the slot machine has, say 30 indexed positions, some of which may display a corresponding indicium. A player of the slot machine is required to place a wager by introducing coins, tokens or credit into the slot machine, which then enables the reels to be spun and to come to rest at any of the indexed positions. One combination of indexed rest positions is usually allowed to win a prize
30 consisting of a fixed jackpot. A slot machine with this particular geometry provides the player with a 1 in 27 000 chance of winning the fixed jackpot.

In order to take advantage of the random nature of the indexed rest positions of the reels, it is known to replace the fixed jackpot by a progressive jackpot in which a
35 proportion of each wager placed by the player of the slot machine is used to

5 Increment the jackpot. The randomness makes it possible for the progressive
jackpot to become large relative to the fixed jackpot described above, which
enhances the attractiveness of the slot machine to would-be players thereof. It
must, of course, be appreciated that the randomness also raises the possibility of
the progressive jackpot being won when it is small relative to the above fixed
10 jackpot.

The probability winning the jackpot is the reciprocal of the number of all possible
outcomes of the game, which will be referred to as the jackpot cycle of the game,
for convenience. As an illustration, the jackpot cycle of the three-reel slot machine
15 earlier in this specification is 27 000. This means that, on average, 27 000
outcomes of the game must be determined in order for the contents of the
accumulation account, or jackpot, to be won by the player.

The next step in the evolution of jackpot wagering systems was to link multiple slot
20 machines having identical jackpot cycles to the same progressive jackpot, leading
to the creation of larger and more attractive jackpots. Initially, the multiple identical
slot machines linked to such progressive jackpots were in close proximity, such as
within a land-based casino, but the advent of low-cost telecommunication soon
enabled multiple remote clusters of identical slot machines to be linked to a single
25 progressive jackpot. It is a characteristic of such distributed progressive jackpot
wagering systems that they are restricted to casinos belonging to a single business
enterprise.

The advent of the Internet has led to a proliferation of online casinos, bringing
30 online gaming within the reach of anyone with access to the World Wide Web of
the Internet. Jackpot wagering systems and progressive jackpot wagering systems
have now become available through such online casinos. Such online progressive
jackpot wagering systems have evolved further to a point where it is now known for
players at competing online casinos to be able to play identical casino games
35 linked to a common progressive jackpot. Access to these types of progressive

- 5 Jackpot wagering systems is provided through jackpot portals on the World Wide Web.

OBJECT OF THE INVENTION

- 10 It is an object of this invention to provide a jackpot wagering system, and a method for jackpot wagering that exhibits increased functionality relative to prior art equivalents.

SUMMARY OF THE INVENTION

- 15 In accordance with this invention there is provided a jackpot wagering system, comprising:
- a player terminal operable by a player to place a wager on a turn of at least one game of chance, the wager having a maximum limit;
 - 20 an accumulation facility responsive to placement of the wager to accumulate a portion thereof in an accumulation account;
 - a random event generator activatable to generate a random event upon which an outcome of the at least one game of chance is based, the outcome including a favourable outcome causing the player to win a determinable portion of the
 - 25 contents of the accumulation account; and
 - a determination facility responsive to placement of the wager to determine, prior to activation of the random event generator, the determinable portion of the contents of the accumulation account as a function of at least the size of the wager and the maximum limit thereof.
- 30 Further features of the invention provide for the player terminal to be operable to place a wager on a turn of any one of a plurality of different selectable games of chance, each one of the plurality of different games of chance having a corresponding maximum limit for a wager and a respective favourable outcome
- 35 causing the player to win a determinable portion of the contents of the

5 accumulation account, for contents of the accumulation account to be
denominatable in a base currency, for the wager to be denominatable in any one of
a number different permissible playing currencies, for the base currency to be
stronger than or equal to a strongest one of the permissible playing currencies, for
the strongest one of the permissible playing currencies to be the base currency, for
10 the maximum limit of the wager to be denominated in the base currency, for the
jackpot wagering system to include a conversion facility instructable to convert a
wager from any one of the different permissible playing currencies to an equivalent
wager in the base currency, for the conversion facility to include a stored spot
exchange rate from any one of the permissible playing currencies to the base
15 currency, and for the stored spot exchange rates to be selectively updateable from
time to time.

Still further features of the invention provide for the wager to be denominatable as
an integral number of units of any one of the permissible playing currencies,
20 alternatively for the wager to be denominatable as an integral number of fractional
units of any one of the permissible playing currencies.

Yet further features of the invention provide for the function by which the portion of
the contents of the accumulation account to be won by the player is determined by
25 the determination facility to be a ratio of the size of the wager to the maximum limit
thereof, for the determination facility to determine the size of the wager as a
function of the particular permissible playing currency in which the wager is
denominated and a corresponding denomination of the of units or fractional units of
that playing currency, and for the determination facility to determine the maximum
30 limit of the wager as a function of the base currency.

There is also provided for each one of the plurality of different games of chance to
have a corresponding jackpot cycle, for the determination facility to determine,
prior to activation of the random event generator, the determinable portion of the
35 contents of the accumulation account as a function of at least the size of the

5 wager, a maximum limit thereof, and a jackpot cycle of the selected game of
chance, for the function by which the portion of the contents of the accumulation
account to be won by the player is determined by the determination facility to be a
product of a ratio of the size of the wager to the maximum limit thereof, and a
relative size of the jackpot cycle of the selected game of chance, and for the
10 relative size of the jackpot cycle of the selected game to be a ratio of the jackpot
cycle of the selected game to the greatest jackpot cycle of any one of the plurality
of different selectable games.

There is further provided for the outcome of the at least one game of chance to
15 include a plurality of different partially favourable outcomes, preferably three
partially favourable outcomes, alternatively five partially favourable outcomes, each
partially favourable outcome causing the portion of the contents of the
accumulation account to be won by the player to be to be proportionally reduced,
for the proportional reduction in response to the occurrence of a partially
20 favourable outcome of the game of chance to be inversely proportional to the
probability of occurrence of the corresponding outcome, for the portion of the
wager accumulated in the accumulation account by the accumulation facility to be
a percentage of the wager, preferably three percent, and for the accumulation
account to be held at a financial institution.

25

The invention extends to a method for jackpot wagering, comprising the steps of:
placing a wager on a turn of at least one game of chance, the wager having a
maximum limit;
accumulating a portion of the wager in an accumulation account;
30 generating a random event upon which an outcome of the at least one game of
chance is based, the outcome including a favourable outcome causing the player
to win a determinable portion of the contents of the accumulation account; and
determining, prior to generating the random event, the determinable portion of the
contents of the accumulation account as a function of at least the size of the wager
35 and the maximum limit thereof.

5

The method includes the further step of placing a wager on a turn of any one of a plurality of different selectable games of chance, each one of the plurality of different games of chance having a corresponding maximum limit for a wager and a respective favourable outcome causing the player to win a determinable portion
10 of the contents of the accumulation account, for denominating the contents of the accumulation account in a base currency, for denominating the wager in any one of a number different permissible playing currencies, the base currency being stronger than or equal to a strongest one of the permissible playing currencies, for selecting the strongest one of the permissible playing currencies to be the base
15 currency, for denominating the maximum limit of the wager in the base currency, for converting a wager from any one of the different permissible playing currencies to an equivalent wager in the base currency, for providing a stored spot exchange rate from any one of the permissible playing currencies to the base currency, and for selectively updating the stored spot exchange rates from time to time.

20

There is still further provided for denominating the wager as an integral number of units of any one of the permissible playing currencies, alternatively for denominating the wager as an integral number of fractional units of any one of the permissible playing currencies.

25

There is yet further provided for determining the portion of the contents of the accumulation account to be won by the player as a ratio of the size of the wager to the maximum limit thereof, for determining the size of the wager as a function of the particular permissible playing currency in which the wager is denominated and
30 a corresponding denomination of the of units or fractional units of that playing currency, and for determining the maximum limit of the wager as a function of the base currency.

There is also provided for further determining a jackpot cycle of each one of the
35 plurality of different games of chance, for determining, prior to generating the

- 5 random event, the determinable portion of the contents of the accumulation account as a function of at least the size of the wager, a maximum limit thereof, and a jackpot cycle of the selected game of chance, for determining the portion of the contents of the accumulation account to be won by the player as a product of a ratio of the size of the wager to the maximum limit thereof, and a relative size of
- 10 the jackpot cycle of the selected game of chance, and for determining the relative size of the jackpot cycle of the selected game as a ratio of the jackpot cycle of the selected game to the greatest jackpot cycle of any one of the plurality of different selectable games;
- 15 There is also provided for establishing a plurality of different partially favourable outcomes for the at least one game of chance, preferably three partially favourable outcomes, alternatively five partially favourable outcomes, for proportionally reducing the portion of the contents of the accumulation account to be won by the player corresponding to each partially favourable outcome, for proportionally
- 20 reducing the portion of the contents of the accumulation account to be won by the player in response to the occurrence of a partially favourable outcome of the game of chance in inverse proportion to the probability of occurrence of the corresponding outcome, for accumulating the portion of the wager in the accumulation account as a percentage of the wager, preferably three percent, and
- 25 for holding the accumulation account at a financial institution.

BRIEF DESCRIPTION OF THE DRAWINGS

- One embodiment of the invention is described below, by way of example only, and
- 30 with reference to the abovementioned drawings, in which:

Figure 1 is schematic representation of a jackpot wagering system according to the invention;

5 Figure 2 is a simplified flow chart of the operation of the jackpot wagering system of Figure 1; and

Figure 3 is a flow chart of a computation of a scale of play for the jackpot wagering system of Figure 1.

10

DETAILED DESCRIPTION OF THE INVENTION

Referring to Figure 1, a jackpot wagering system is indicated generally by reference numeral (1).

15

The jackpot wagering system (1) includes a gaming server (2) and a player terminal (3) in the form of a computer workstation with an associated display monitor (4) and a pointing device (5), such as a mouse or a touchpad. The computer workstation (3) is located remotely from the gaming server (2) and communication between the computer workstation and the gaming server is provided across a communication network (6) that is, in this embodiment, the Internet. The system (1) also includes an accumulation facility (7) in the form of an application server that is also connected to the communication network (6).

20 The computer workstation (3) is a conventional personal computer operating under a Windows 2000 operating system, which is well known and commercially available from the Microsoft Corporation of Seattle, Washington, USA. The computer workstation (3) executes one or more simulation software programs, each of which simulates the progress of a different game of chance. The generic operation of the simulation programs will be described in more detail in the description that follows.

25 The gaming server (2) includes a random event generator in the form of a computer program (8) that is executable to generate random events upon which an outcome of any one of the games of chance is based. As an illustration, one of the

30

5 simulation programs on the computer workstation (3) simulates a game of roulette and, in this instance, the random event generation program (8) is executable to select, on a random basis, an integer between 0 and 36 that is displayed on the computer workstation as a ball coming to rest at a corresponding one of 37 demarcated positions on a roulette wheel. As a further illustration, another one of
10 the simulation programs simulates a game of draw poker and the random event generation program (8) is executable to generate five random integers between 1 and 52 that correspond to five playing cards making up a particular hand of poker.

The application server (7) also operates under the Windows 2000 operating
15 system and executes an accumulation software program (9) that communicates with the gaming server (2).

A player wishing to use the jackpot wagering system (1) is first required to register and to create an account on the gaming server (2). The player is then required to
20 pre-fund the account by purchasing credit that will, for convenience, be denominated in this description in "units". The gaming server (2) stores a credit balance corresponding to the player's account at all times.

In order to commence, the player uses the computer workstation (3) to log onto the
25 gaming server (2) and initiates execution of any selected one of the simulation software programs, which displays an appropriate image of a corresponding game of chance on the monitor (4). The player now enters a betting phase of the game of chance by making a wager on the game. The player may make any wager that is permitted for the particular selected game. The player's wager is denominated as
30 an integral number of units of credit. The size of the player's wager is displayed on the display monitor (4). There must be sufficient credit in the player's account to cover any wager that is made by the player. Data relating to the type and size of the wager made by the player is transmitted by the computer workstation (3) across the communication network (6) to the gaming server (2) for where it is

- 5 recorded in a database on an associated storage device (10), such as a magnetic or optical storage disk.

The gaming server (2) forwards data relating to the size of each wager across the communication network (6) to the application server (7) where it is processed by
10 the accumulation software program (9). The accumulation software program (9) maintains a balance of an accumulation account on the application server (7) and increments this a balance by an amount equal to a predetermined portion of each wager made by the player. The predetermined portion of each wager that is accumulated in this manner is 3 percent of the wager.

15 It is envisaged that a plurality of different players may each simultaneously use the jackpot wagering system (1), each from a corresponding different computer workstation (3). Each player may individually select which of the available games of chance they wish to play. The accumulation software program (9) increments
20 the balance of the accumulation account by an amount corresponding to a predetermined portion of each wager made by each one of the plurality of different players using the jackpot wagering system (1). It will be appreciated by those skilled in the art that the balance of the accumulation account can rapidly become large, which renders the jackpot wagering system (1) attractive to participating and
25 would-be players.

Each one of the selectable games of chance has a single favourable outcome, three partially favourable outcomes, and a plurality of unfavourable outcomes. When the random event generator (8) generates random events that result in an
30 unfavourable outcome, the player's wager is forfeited to an operator of the jackpot wagering system. When a favourable outcome of the game of chance occurs, the player wins the entire contents of the accumulation account. When a partially favourable outcome occurs, the player wins a predetermined fraction of the contents of the accumulation account. The game of chance also has a number of
35 intermediate outcomes, each of which causes the player to win the wager at

5 predetermined fixed odds. The payout characteristics of the game of chance are arranged such that the predetermined fraction of the contents of the accumulation account that is won by the player in response to the occurrence of any one of the partially favourable outcomes of the game of chance is inversely proportional to the probability of that outcome.

10

In a first variation of this embodiment of the invention, a player is able to make a wager that is denominated as an integral number of fractional units of credit. This is analogous, in a physical environment, to making wagers denominated in different coin sizes.

15

In a further variation of this embodiment of the invention, a player may purchase credit and make a wager in any one of a number of different permissible playing currencies. The jackpot wagering system (1) also has a base currency that is used to denominate the balance of the accumulation account. For convenience, the
20 base rate has an exchange rate less than or equal to unity with each one the permissible playing currencies. This means that it is either stronger than all of the permissible playing currencies or, when the base currency is one of the permissible playing currencies, it is the strongest of the permissible playing currencies.

25

In order to further illustrate the operation of the jackpot wagering system (1), a number of illustrative examples are outlined below. It is, however, first necessary to introduce a parameter termed "scale of play". The scale of play is defined as being a percentage of the jackpot that will be won by the player on the next turn of the
30 selected game of chance if the outcome of the turn is a favourable outcome. It will be appreciated that the scale of play will always lie between zero and one. The scale of play for a particular turn of the game is a function of the following playing parameters: the size of the wager made by the player, which is, in turn, determined by the "coin size" and the permissible playing currency used by the player in
35 making the wager, and the jackpot cycle of the particular game selected by the

5 player. In order to determine a scale of play that accommodates a choice of
playing currency, a choice of "coin size" and a choice of game from a menu of
games having differing jackpot cycles, each one of these playing parameters is
normalised, respectively, against a corresponding maximum value of these playing
parameters that are, respectively, base currency, a "coin size" that is an integral
10 unit of credit, and the largest jackpot cycle of any one of the plurality of games of
chance selectable by the player.

The calculation of scale of play for any particular turn of the selected game of
chance is determined as a product of the above three normalised playing
15 parameters, expressed as a percentage, namely:

$$\text{Scale (\%)} = \text{Currency (\%)} * \text{Coin size (\%)} * \text{Jackpot Cycle (\%)}$$

20 The computed scale parameter determines the portion of the jackpot that can be
won by the player on the turn of the game upon the occurrence of a favourable
outcome. The scale parameter is displayed to the player by means of an icon on
the display monitor (4).

25 It will be further appreciated by those skilled in the art that the predetermined
portion of the wager accumulated by the application server (7) is determined by the
first two of the above parameters, choice of permissible playing currency and the
"coin size" used by the player to make the wager.

Example 1 (Multi-currency)

30

The base currency of the jackpot wagering system (1) is United States Dollars (\$).
the accumulated total of the jackpot is \$20 000,00 with a wager requirement of 3 x
\$1 coins to win the jackpot of the particular game.

- 5 A \$ player wagering 3 x \$1 coins will be playing at a scale of 100% and can win the entire contents of the jackpot upon the occurrence of a favourable event.

The scale of play for an Australian Dollar (AUD) player wagering 3 x 1 AUD coins at an exchange rate of \$1 = 2 x AUD will be:

10
$$\begin{aligned}\text{Scale} &= \text{Currency (\%)} * \text{Coin size (\%)} * \text{Jackpot Cycle (\%)} \\ &= \text{AUD (\%)} * 100\% * 100\% \\ &= 50\% * 100\% * 100\% \\ &= 50\%\end{aligned}$$

- 15 In this instance, the player will see a scale parameter of 50% displayed on the display monitor (4) and will win 50% of the jackpot, namely \$10 000,00, which is equivalent to AUD 20 000,00, upon the occurrence of a favourable event.

- 20 If the contribution percentage for the selected game is 3%, the player's contribution to the jackpot is 3% of his wager, namely $3\% * \text{AUD } 3 = \text{AUD } 0,09 = \$0,045$.

Example 2 (Multiple Coinsize)

- 25 The base currency of the jackpot wagering system (1) is USD, the accumulated total of the jackpot is \$20 000,00 with a wager requirement of 3 x \$1 coins to win the jackpot of the particular game.

- 30 A \$ player wagering 3 x \$1 coins will be playing at a scale of 100% and can win the entire contents of the jackpot upon the occurrence of a favourable event.

The scale of play for a \$ player, wagering 3 x \$0.25 coins will be:

35
$$\begin{aligned}\text{Scale} &= \text{Currency (\%)} * \text{Coin size (\%)} * \text{Jackpot Cycle (\%)} \\ &= 100\% * 25\% * 100\% \\ &= 25\%\end{aligned}$$

5

In this instance, the player will see a scale parameter of 25% displayed on the display monitor (4) and will win 25% of the jackpot, namely \$5 000,00, upon the occurrence of a favourable event.

- 10 If the contribution percentage for the selected game is 3%, the player's contribution to the jackpot is 3% of his wager, namely $3\% * \$0,75 = \$0,0225$.

Example 3 (Multi Game)

- 15 The base currency of the jackpot wagering system (1) is USD, the accumulated total of the jackpot is \$20 000,00 with a wager requirement of 3 x \$1 coins to win the jackpot in any of two participating games – Game 1 and Game 2.

- 20 Game 1 has a jackpot cycle of 200 000 with a probability of 1 in 200 000 of winning the jackpot, while game 2 has a jackpot cycle of 150 000, or a 1 in 150 000 probability of winning the same jackpot. Both games have the same wager requirements, but different jackpot cycles (probabilities of winning the jackpot). In this example, a player of game 2 is $200\ 000/150\ 000 = 1,333$ times as likely to win the jackpot as a player of game 1.

25

A \$ player wagering 3 x \$1 coins on game 1 will be playing at a scale of 100% and can win the entire contents of the jackpot upon the occurrence of a favourable event.

- 30 The same, or another, \$ player wagering 3 x \$1 coins on game 2 will be playing at the following scale of play:

$$\begin{aligned}\text{Scale} &= \text{Currency (\%)} * \text{Coin size (\%)} * \text{Jackpot Cycle (\%)} \\ &= 100 (\%) * 100\% * 75\% \\ &= 75\%\end{aligned}$$

35

15

5

In this instance, the player will see a scale parameter of 75% displayed on the display monitor (4) and will win 75% of the jackpot, namely \$15 000,00, upon the occurrence of a favourable event.

- 10 If the contribution percentage for both of these games is 3%, the player's contribution to the jackpot are 3% of the wager in each case, namely $3\% \times \$3,00 = \$0,09$ in respect of each one of the games.

Example 4 (Partial Jackpots on the Pay Table)

15

- The base currency of the jackpot wagering system (1) is USD, the accumulated total of the jackpot is \$20 000,00 with a wager requirement of 3 x \$1 coins to win the jackpot on a first win line, that is, on the occurrence of a favourable event. The game also enables a player to win 50% of the jackpot on a second win line, that is, on the occurrence of a partially favourable event.

A \$ player wagering 3 x \$1 coins will be playing at a scale of 100% and can win the entire contents of the jackpot upon the occurrence of a favourable event.

- 25 The same player will also be eligible to win, who is playing at a scale of play of 100%, will also be eligible to win 50% of the jackpot, namely \$10 000,00 on the occurrence of a partially favourable event on the second win line.

- 30 If the contribution percentage for the selected game is 3%, the player's contribution to the jackpot is 3% of his wager, namely $3\% \times \$3,00 = \$0,09$.

35

5 Example 4 (Multi Currency, Multiple Coinsize, Multi Game)

The base currency of the jackpot wagering system (1) is USD, the accumulated total of the jackpot is \$20 000,00 with a wager requirement of 3 x \$1 coins to win the jackpot in any of two participating games - Game 1 and Game 2.

10

Game 1 has a jackpot cycle of 200 000 with a probability of 1 in 200 000 of winning the jackpot, while game 2 has a jackpot cycle of 150 000, or a 1 in 150 000 probability of winning the same jackpot. Both games have the same wager requirements, but different jackpot cycles (probabilities of winning the jackpot). In

15 this example, a player of game 2 is $200\ 000/150\ 000 = 1,333$ times as likely to win the jackpot as a player of game 1.

A \$ player wagering 3 x \$1 coins on game 1 will be playing at a scale of 100% and can win the entire contents of the jackpot upon the occurrence of a favourable

20

event.

The scale of play for an Australian Dollar (AUD) player wagering 3 x 0,25 AUD coins on game 2 at an exchange rate of \$1 = 2 x AUD will be:

25

$$\begin{aligned}\text{Scale} &= \text{Currency (\%)} * \text{Coin size (\%)} * \text{Jackpot Cycle (\%)} \\ &= \text{AUD (\%)} * 25\% * 75\% \\ &= 50\% * 25\% * 75\% \\ &= 9,375\%\end{aligned}$$

30 In this instance, the player will see a scale parameter of 9,375% displayed on the display monitor (4) and will win 9,375% of the jackpot, namely \$1 875,00, which is equivalent to AUD 3750,00, upon the occurrence of a favourable event.

- 5 If the contribution percentage for the selected game is 3%, the player's contribution to the jackpot is 3% of his wager, namely $3\% \times \text{AUD } 0,75 = \text{AUD } 0,0225 = \$0,01125$.

- 10 When the outcome of the selected game is any one of the three partially favourable outcomes, the portion of the contents of the accumulation account that is won by the player is proportionally reduced. The proportional reduction in response to the occurrence of a partially favourable outcome of the game of chance is inversely proportional to the probability of occurrence of that partially favourable outcome.

15

- It will be still further appreciated by those skilled in the art that the invention provides a jackpot wagering system that exhibits a greater degree of functionality than prior art equivalents. The technical problem solved by this invention is that of creating a jackpot wagering system with an open architecture. Additional participating games can be added to the system with ease, the only relevant parameter of an additional game that needs to be considered being a size of a jackpot cycle of the game. Further, the jackpot wagering system, which enables multiple playing currencies to be used for wagering can be expanded simply to accommodate one or more additional playing currencies. The use of an open communication channel such as the Internet to provide communication between the various component parts of the jackpot wagering system removes any geographic or organisational limitations that are characteristic of prior art jackpot wagering systems. Still further, the jackpot wagering system, which is suitable for use with online casinos, enables different casinos to participate in the system, each casino being able to link their own menus of games for participation in the common jackpot.
- 20
- 25
- 30

- Numerous modifications are possible to this embodiment without departing from the scope of the invention. In particular, the jackpot wagering system may be such that only wagers in integral units of any permissible playing currency are permitted,
- 35

5 with use of fractional "coin sizes" being disallowed. Further, the jackpot wagering
system can include more than one accumulation account, allowing each game of
chance to participate in multiple different jackpots simultaneously. Contributions to,
and wins on each jackpot are independent of each other. Still further, the portion of
the wager that is accumulated in the accumulation account may be variable
10 instead of being a fixed portion. For example, larger contributions, say 5 percent of
the wager, may be accumulated in the accumulation account when the balance of
the account is small, decreasing linearly to a minimum of 3 percent as the balance
of the accumulation account increases. Yet further, each participating game of
chance may have five partially favourable outcomes instead of three.

15

The invention therefore provides a jackpot wagering system that includes multi-
game, multi-currency, multi-coin size and multi-jackpot functionality.
